

Once the Fed is done tightening, how will real estate perform?

The end of the Fed tightening cycle, which we believe to be imminent, has historically been an important juncture for markets as investors reposition for a new investment regime. A review of the four rate hike cycles over the last three decades shows that public REITs¹ outperformed both private real estate² and public equities³ in the 90-day, 180-day, and 1-year periods following the end of Fed tightening (Figure 1).

Figure 1: Average Total Returns Following End of Fed Rate Hike Cycles

Average of returns beginning 3/31/1995, 6/30/2000, 6/30/2006, and 12/31/2018. Private real estate = NFI-ODCE Index; Public equities = S&P 500 Index; REITs = FTSE Nareit All Equity REITs (FNER). Source: Bloomberg, NCREIF, May 5, 2023.

These findings make intuitive sense; during times of rising rates, public markets tend to discount rate-sensitive assets such as real estate, and build in an associated risk premium that then creates a true discount and subsequent upside opportunity when the regime changes. Diving deeper into this historical relationship, we see that the steeper the REIT net asset value (NAV) discount at the end of the rate hiking cycle, the wider the outperformance of REITs versus private real estate in the one year that follows.

Today, REITs are trading at 87% of their underlying forward NAVs, materially below the historical average, due mainly to accelerated repricing in the public real estate market in the context of higher debt costs. This repricing has yet to fully occur in the private market, rendering a 15.6% difference in total returns over the trailing twelve months between public and private markets. Given these discounted public REIT valuations and the changing monetary regime, REITs screen as an attractive investment entry point today compared to their private counterparts and are poised to generate meaningful outperformance with a regime change (Figure 2 on the following page).

If we further examine the relationship between REITs and equities, we find that the cheaper REITs trade versus equities on a multiple basis at the time of the regime change, the steeper the REIT market outperforms those equities in the twelve months following the end of a rate hiking cycle. Typically, REITs trade at a slight premium to equities on a historical basis. Today, however, REITs are trading slightly cheaper, indicating the potential for moderate outperformance versus the S&P 500 in the twelve months following the end of this rate hiking cycle (Figure 3).

While historical results are not necessarily indicative of future performance, we do believe favorable fundamentals coupled with balance sheet strength and discounted valuations across the U.S. REIT market sets up an attractive opportunity for investors in listed real estate. The data suggests that this scenario will be particularly true on a relative basis compared to opportunities in the private real estate market and broader equities.

Any indication of past performance is not a guide to future performance. The value of investments can fall as well as rise, so investors may get back less than originally invested. Because the investment strategies concentrate their assets in the real estate industry, an investment is closely linked to the performance of the real estate markets. Investing in the equity securities of real estate companies entails certain risks and uncertainties. These companies experience the risks of investing in real estate directly. Real estate is

a cyclical business, highly sensitive to general and local economic developments and characterized by intense competition and periodic overbuilding. Real estate income and values may also be greatly affected by demographic trends, such as population shifts or changing tastes and values. Companies in the real estate industry may be adversely affected by environmental conditions. Government actions, such as tax increases, zoning law changes or environmental regulations, may also have a major impact on real estate. Changing interest rates and credit quality requirements will also affect the cash flow of real estate companies and their ability to meet capital needs.

Definition of Indices

FTSE Nareit All Equity REITs Index (FNER)

The FTSE Nareit All Equity REITs Index is a free-float adjusted, market capitalization-weighted index of U.S. equity REITs. Constituents of the index include all tax-qualified REITs with more than 50 percent of total assets in qualifying real estate assets other than mortgages secured by real property.

S&P 500 Index

The S&P 500 is an index that is considered to be a gauge of the U.S. equities market. The index includes 500 leading companies spread across the major sectors of the U.S. economy. The index focuses on the larger cap segment of the U.S. market and represents approximately 75% of the market capitalization of U.S. securities. The index is the most notable of the many indices owned and maintained by Standard & Poor's, a division of McGraw-Hill Companies.

NFI ODCE: NCREIF Open End Diversified Core Equity (ODCE) Index

The ODCE, short for NCREIF Fund Index - Open End Diversified Core Equity, is the first of the NCREIF Fund Database products and is an index of investment returns reporting on both a historical and current basis the results of 36 open-end commingled funds pursuing a core investment strategy, some of which have performance histories dating back to the 1970s.

These benchmarks are broad-based indices which are used for illustrative purposes only and have been selected as they are well known and are easily recognizable by investors. However, the investment activities and performance of an actual portfolio may be considerably more volatile than and have material differences from the performance of any of the referenced indices. Unlike these benchmarks, the portfolios portrayed herein are actively managed.

Furthermore, the portfolios invest in substantially fewer securities than the number of securities comprising each of these benchmarks. There is no guarantee that any of the securities invested in by the portfolios comprise these benchmarks. Also, performance results for benchmarks may not reflect payment of investment management/incentive fees and other expenses. Because of these differences, benchmarks should not be relied upon as an accurate measure of comparison. A direct investment in an index is not possible.
